

Exporting Embroidery Files

Check all important parameters before exporting any embroidery file!

Unresolved error messages can damage the fabric or the machine.

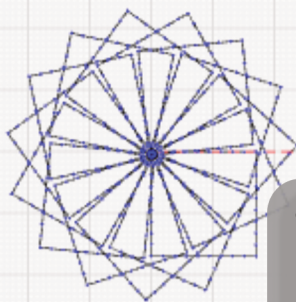

1. Design

3. Size

2. Errors

1. Make sure something to export is **visible on the stage**. Files from empty stages can crash the machines.
2. **Remove all error messages** before exporting anything. Check the card “Error Messages”
3. Check that the design doesn’t exceed the **maximum size** of the frame. Too large designs won’t be displayed

Exporting Embroidery Files

TurtleStitch

1.

1. Look for a reasonable **number of stitches**. 2000 stitches take roughly 5 minutes to embroider.

The number of stitches can be reduced by a different stitch type or a different distance between stitches.

Stitches : 753

Jumps : 23

Size : 9.33 x 4.69 cm

+ - Reset View

☐ X-Ray

☐ Turbo mode

Zoom to fit

2.

Export as SVG

Export as Melco/EXP

Export as Tajima/DST

☐ Ignore c

2. Choose the right **file format** for your machine. If you are not sure which type you need, check the manual of your machine.

Once you click one of the export buttons, your embroidery design will be downloaded to the Downloads folder of your browser. Use a USB stick to get it to the machine.
